

TOMI SALAMI

Software Engineer · React/TypeScript & Financial Systems · Founder

+1 (416) 732-6016 · salami.tomie@gmail.com · github.com/tomie-s · linkedin.com/in/tomisalami · Toronto, ON (Remote-open)

Software engineer with 4+ years building production systems across fintech startups, enterprise banking, and independent product development, plus 5 years of prior hands-on banking operations experience at HSBC Bank Canada. Currently own a Mantine-based internal design system at TD Securities, consumed by multiple engineering teams, and independently architect the full backend for Dascet, a fintech platform I founded to help young Canadians navigate financial products. Comfortable moving across languages and stacks — React/TypeScript day-to-day, Python and Java also in active use — with a strong bias toward system correctness and financial data integrity, and daily, disciplined use of AI-assisted development tools (Claude Code) throughout design, implementation, and review.

SKILLS & TECHNOLOGIES

Languages & Backend: TypeScript, JavaScript, Node.js, Python, Java, REST API design, SQL schema design

Frontend: React, Next.js, Mantine, HTML, CSS, Figma

Data & Databases: PostgreSQL, Supabase (with RLS), event-driven data flows, vector search

Financial Systems Domain: banking platform migrations, compliance & audit workflows, regulated-environment engineering, financial product operations

Testing & Reliability: React Testing Library, Vitest, Test-Driven Development (TDD), code review, error-boundary/edge-case handling

Cloud & DevOps: AWS, Azure, Vercel, GitHub Actions, CI/CD, Git

AI-Assisted Development: Claude Code — used daily for design, implementation, and review with critical evaluation of output

EXPERIENCE

Software Engineer — Corporate & Investment Banking May 2025 – Present

TD Securities · Hybrid

- Own a Mantine-based internal design system consumed by multiple engineering teams — component architecture, documentation, and adoption support across the org, operating in a hybrid Solutions Architect-level capacity.
- Own features end-to-end — from compliance stakeholder requirements through production-ready delivery — for an internal regulatory oversight dashboard monitoring investment breach data across multiple business lines, in a high-stakes environment where accuracy is audited.
- Developed interactive chart and table components with dynamic filtering to surface investment breach data at scale, solving for clarity and performance in a data-dense interface.
- Integrate backend APIs into frontend data flows, owning the full request lifecycle: async state, error boundaries, and edge-case handling.
- Write component and unit tests (React Testing Library) as standing practice, not an afterthought, given the regulatory and financial stakes of the platform.

Founder & Full-Stack Developer 2024 – Present

Dascet Inc. (Fintech Startup) · Toronto, ON · Independent

- Independently architect and own the full backend and data layer for Dascet, a financial intelligence platform helping young Canadians navigate financial products: PostgreSQL schema design (Supabase, with RLS), a Hono REST API, and vector-search infrastructure (Voyage AI embeddings) over a 200+ item curated financial product dataset.
- Designed a three-layer reasoning system (public, community, and personal signals) with an LLM-powered interpretation layer — hands-on experience building AI-assisted reasoning directly into a product, not just the development workflow.
- Executed a full technical migration off a no-code platform onto a custom stack, and later paused a feature-complete build to re-architect around a stronger technical thesis — prioritizing system correctness and defensibility over shipping speed.
- Manage cloud hosting, environment configuration, and deployment independently as a solo founder-engineer.
- Apply a decade of banking domain experience (HSBC operations, TD Securities compliance tooling) directly to data modeling, schema design, and the evaluation logic behind the platform.

Freelance Software DeveloperOct 2022 – Dec 2024

Contract — Various Clients · Remote

- Delivered end-to-end web applications across multiple industries, from requirements through deployment, using React, JavaScript, HTML/CSS, and database integrations.
- Applied modular design principles and consistent documentation to produce maintainable, scalable solutions across independent engagements.

Full-Stack DeveloperMay 2021 – June 2022

Wavy · Remote

- Owned large slices of V1 for a B2B SaaS platform, building onboarding flows, event registration UI, and manager dashboards from wireframe to shipped feature.
- Created and deployed forms tied to PostgreSQL databases, contributing to a \$50K+ increase in monthly subscriptions.
- Built manager-facing dashboards turning raw participation data into actionable insights.
- Reduced marketplace search load times by 50% through frontend optimization and backend query improvements.
- Collaborated cross-functionally with product, design, and engineering to align delivery with roadmap.

Data & Operations Associate (Banking Domain)Dec 2015 – May 2021

HSBC Bank Canada · Toronto, ON

- Worked within strict information security and data protection standards in a regulated financial institution.
- Led technical transition of customers to new online banking platforms, owning data integrity and end-user experience through migration.
- Built deep expertise in financial products, banking operations, compliance workflows, and customer data systems — domain knowledge that now directly informs engineering decisions on financial platforms.
- Created automated anomaly detection processes in Excel, improving audit accuracy and reducing manual review cycles on financial data.
- Authored SOPs and training materials that cut new-hire onboarding time by 50%; presented monthly BI reports to guide product and sales strategy.

EDUCATION

Master of Management, Innovation & Entrepreneurship · Queen's University · 2019

Bachelor of Business Administration · York University · 2013

OBSIDI Academy Full-Stack Software Engineering Bootcamp (in partnership with TD Bank) · 2025

Additional technical training: Software Developer Fast Track (SkillCrush, 2021) · Information Technology Course (CourseCareers, 2024)
